```
if_stmt: IF expr THEN stmt
       | IF expr THEN stmt ELSE stmt
;
--------------------------------------------------------------
exemplo 1;
sequence: /* empty */          { printf ("empty sequence\n"); }
        | maybeword
        | sequence WORD        { printf ("added WORD %s\n", $2); }
;
maybeword: /* empty */         { printf ("empty maybeword\n"); }
        | WORD                 { printf ("single WORD %s\n", $1); }
;
--------------------------------------------------------------
solução 1/1;
sequence: /* empty */          { printf ("empty sequence\n"); }
        | sequence WORD        { printf ("added WORD %s\n", $2); }
;
--------------------------------------------------------------
exemplo 2;
sequence: /* empty */
        | sequence words
        | sequence redirects
;
words:    /* empty */
        | words WORD
;
redirects: /* empty */
        | redirects REDIRECT
;
--------------------------------------------------------------
solução 1/2;
sequence: /* empty */
        | sequence WORD
        | sequence REDIRECT ;
--------------------------------------------------------------
solução 2/2
sequence: /* empty */
        | sequence words
        | sequence redirects ;
words:    WORD
        | words WORD ;
redirects: REDIRECT
        | redirects REDIRECT ;
```
