4.2 Sorting and Searching

Sequential Search

Sequential search. Scan through array, looking for key.

- Search hit: return array index.
- Search miss: return -1.

Search Client: Exception Filter

Exception filter. Read a sorted list of strings from a whitelist file, then print out all strings from standard input not in the whitelist.

```
public static void main(String[] args) {
   In in = new In(args[0]);
   String s = in.readAll();
   String[] words = s.split("\\s+");
   while (!StdIn.isEmpty()) {
      String key = StdIn.readString();
      if (search(key, words) == -1)
         StdOut.println(key);
      }
   }
}
```

```
% more whitelist.txt
more test.txt
                     alice@home
bob@office
                     bob@office
carl@beach
                     carl@beach
marvin@spam
bob@office
                     dave@boat
bob@office
                     % java BinarySearch whitelist.txt < test.txt</pre>
mallory@spam
                     marvin@spam
dave@boat
                     mallory@spam
eve@airport
                     eve@airport
alice@home
```

Searching Challenge 1

Q. A credit card company needs to whitelist 10 million customer account numbers, processing 1,000 transactions per second.

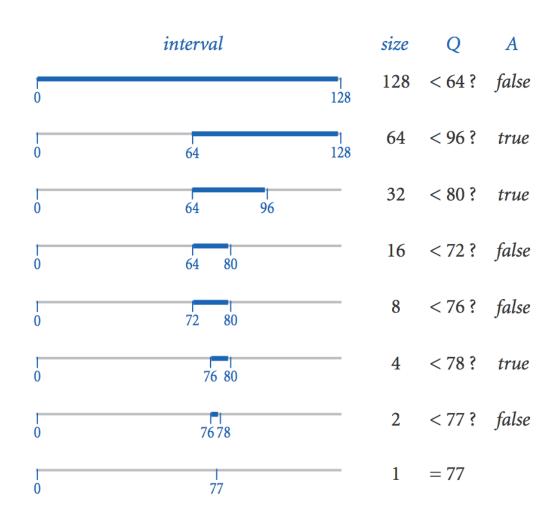

Using sequential search, what kind of computer is needed?

- A. Toaster
- B. Cellphone
- C. Your laptop
- D. Supercomputer
- E. Google server farm

Binary Search

Twenty Questions

Intuition. Find a hidden integer.

Binary Search

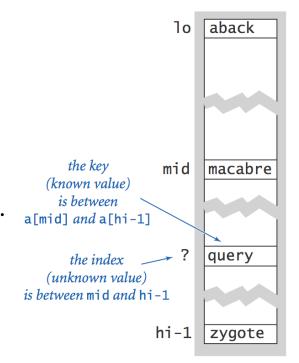

Main idea.

- Sort the array (stay tuned).
- Play "20 questions" to determine index with a given key.

Ex. Dictionary, phone book, book index, credit card numbers, ...

Binary search.

- Examine the middle key.
- If it matches, return its index.
- Otherwise, search either the left or right half.

Binary search in a sorted array (one step)

Binary Search: Java Implementation

Invariant. Algorithm maintains $a[lo] \le key \le a[hi-1]$.

Java library implementation: Arrays.binarySearch()

Binary Search: Mathematical Analysis

Analysis. To binary search in an array of size N: do one compare, then binary search in an array of size N/2.

$$N \rightarrow N/2 \rightarrow N/4 \rightarrow N/8 \rightarrow \dots \rightarrow 1$$

Q. How many times can you divide a number by 2 until you reach 1? A. $\log_2 N$.

```
\begin{array}{c}
1 \\
2 \rightarrow 1 \\
4 \rightarrow 2 \rightarrow 1 \\
8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
32 \rightarrow 16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
64 \rightarrow 32 \rightarrow 16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
128 \rightarrow 64 \rightarrow 32 \rightarrow 16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
256 \rightarrow 128 \rightarrow 64 \rightarrow 32 \rightarrow 16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
512 \rightarrow 256 \rightarrow 128 \rightarrow 64 \rightarrow 32 \rightarrow 16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1 \\
1024 \rightarrow 512 \rightarrow 256 \rightarrow 128 \rightarrow 64 \rightarrow 32 \rightarrow 16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1
\end{array}
```

Searching Challenge 2

Q. A credit card company needs to whitelist 10 million customer account numbers, processing 1,000 transactions per second.

Using binary search, what kind of computer is needed?

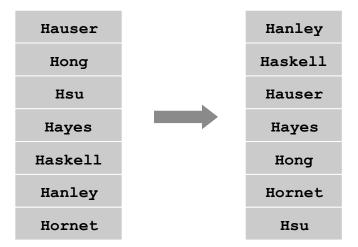

- A. Toaster
- B. Cell phone
- C. Your laptop
- D. Supercomputer
- E. Google server farm

Sorting

Sorting

Sorting problem. Rearrange N items in ascending order.

Applications. Statistics, databases, data compression, bioinformatics, computer graphics, scientific computing, (too numerous to list), ...

Insertion Sort

Insertion Sort

Insertion sort.

- Brute-force sorting solution.
- Move left-to-right through array.
- Exchange next element with larger elements to its left, one-by-one.

2	2		<u>a</u>								
ı	J	0	1	2	3	4	5	6	7		
6	6	and	had	him	his	was	you	the	but		
6	5	and	had	him	his	was	the	you	but		
6	4	and	had	him	his	the	was	you	but		
		and	had	him	his	the	was	you	but		

Inserting a[6] into position by exchanging with larger entries to its left

Insertion Sort

Insertion sort.

- Brute-force sorting solution.
- Move left-to-right through array.
- Exchange next element with larger elements to its left, one-by-one.

i	4		a										
1	J	0	1	2	3	4	5	6	7				
		was	had	him	and	you	his	the	but				
1	0	had	was	him	and	you	his	the	but				
2	1	had	him	was	and	you	his	the	but				
3	0	and	had	him	was	you	his	the	but				
4	4	and	had	him	was	you	his	the	but				
5	3	and	had	him	his	was	you	the	but				
6	4	and	had	him	his	the	was	you	but				
7	1	and	but	had	him	his	the	was	you				
		and	but	had	him	his	the	was	you				

Inserting a[1] *through* a[N-1] *into position (insertion sort)*

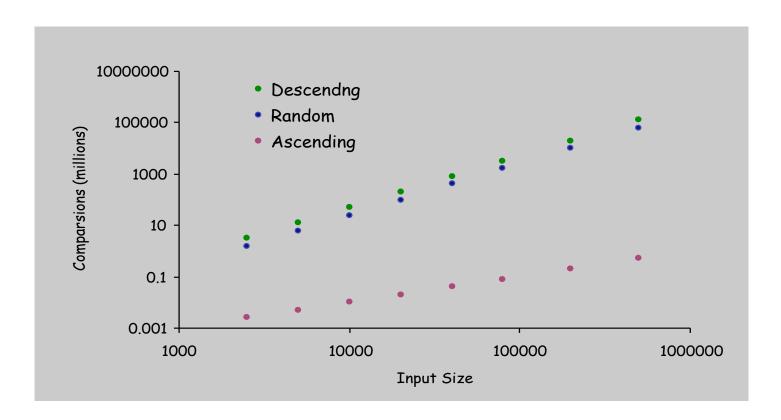

Insertion Sort: Java Implementation

```
public class Insertion {
   public static void sort(String[] a) {
      int N = a.length;
      for (int i = 1; i < N; i++)
         for (int j = i; j > 0; j--)
            if (a[j-1].compareTo(a[j]) > 0)
               exch(a, j-1, j);
            else break;
   private static void exch(String[] a, int i, int j) {
      String swap = a[i];
      a[i] = a[j];
      a[j] = swap;
```

Insertion Sort: Empirical Analysis

Observation. Number of compares depends on input family.

- Descending: $\sim N^2/2$.
- Random: $\sim N^2/4$.
- Ascending: $\sim N$.

Insertion Sort: Mathematical Analysis

Worst case. [descending]

- Iteration i requires i comparisons.
- Total = $(0 + 1 + 2 + ... + N-1) \sim N^2/2$ compares.

Average case. [random]

- Iteration i requires i/2 comparisons on average.
- Total = $(0 + 1 + 2 + ... + N-1)/2 \sim N^2/4$ compares

Sorting Challenge 1

Q. A credit card company sorts 10 million customer account numbers, for use with binary search.

Using insertion sort, what kind of computer is needed?

- A. Toaster
- B. Cell phone
- C. Your laptop
- D. Supercomputer
- E. Google server farm

Insertion Sort: Lesson

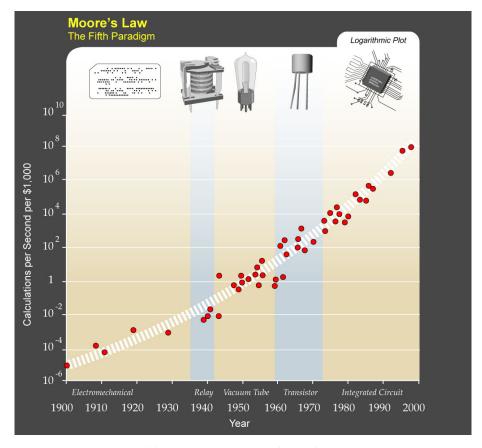

Lesson. Supercomputer can't rescue a bad algorithm.

Computer	Comparisons Per Second	Thousand	Million	Billion
laptop	10 ⁷	instant	1 day	3 centuries
super	1012	instant	1 second	2 weeks

Moore's Law

Moore's law. Transistor density on a chip doubles every 2 years.

Variants. Memory, disk space, bandwidth, computing power per \$.

http://en.wikipedia.org/wiki/Moore's law

Moore's Law and Algorithms

Quadratic algorithms do not scale with technology.

- New computer may be 10x as fast.
- But, has 10x as much memory so problem may be 10x bigger.
- With quadratic algorithm, takes 10x as long!

"Software inefficiency can always outpace Moore's Law. Moore's Law isn't a match for our bad coding." – Jaron Lanier

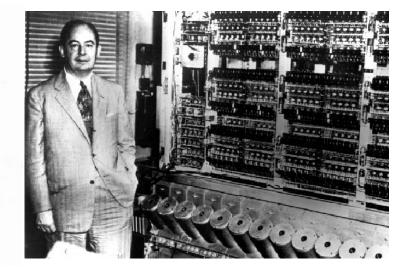

Lesson. Need linear (or linearithmic) algorithm to keep pace with Moore's law.

Mergesort

First Draft of a Report on the EDVAC

John von Neumann

Mergesort

Mergesort algorithm.

- Divide array into two halves.
- Recursively sort each half.
- Merge two halves to make sorted whole.

```
imput
  was had him and you his the but
sort left
  and had him was you his the but
sort right
  and had him was but his the you

merge
  and but had him his the was you
```

Mergesort: Example

M	E	R	G	E	S	0	R	T	E	X	A	M	P	L	E
Ε	M	R	G	E	S	0	R	Т	E	X	A	M	P	L	Ε
Ε	M	G	R	Ε	S	0	R	Т	Ε	X	A	M	Р	L	Ε
E	G	M	R	Ε	S	0	R	E	Т	A	X	M	P	E	L
E	M	G	R	E	S	0	R	Т	E	X	A	M	P	L	E
E	M	G	R	E	S	0	R	Т	E	X	A	M	P	L	E
E	G	M	R	E	0	R	S	E	Т	A	X	M	P	E	L
E	E	G	M	0	R	R	S	A	E	Т	X	E	L	M	P
E	M	G	R	E	S	0	R	E	T	X	A	M	P	L	E
Ε	M	G	R	E	S	0	R	E	Т	Α	X	M	P	L	E
E	G	M	R	E	0	R	S	Α	E	Т	X	M	P	E	L
Ε	M	G	R	E	S	0	R	E	Т	A	X	M	P	L	E
E	M	G	R	E	S	0	R	E	Т	A	X	M	P	E	L
E	G	M	R	E	0	R	S	A	E	Т	X	E	L	M	P
E	Ε	G	M	0	R	R	S	Α	E	E	L	M	P	T	X
A	E	E	Е	Е	G	L	M	M	0	P	R	R	S	Т	X

Merging

Merging. Combine two pre-sorted lists into a sorted whole.

How to merge efficiently? Use an auxiliary array.

i	4	l _e	aux [k]	a										
	k	aux[k]	0	1	2	3	4	5	6	7				
				and	had	him	was	but	his	the	you			
0	4	0	and	and	had	him	was	but	his	the	you			
1	4	1	but	and	had	him	was	but	his	the	you			
1	5	2	had	and	had	him	was	but	his	the	you			
2	5	3	him	and	had	him	was	but	his	the	you			
3	5	4	his	and	had	him	was	but	his	the	you			
3	6	5	the	and	had	him	was	but	his	the	you			
3	6	6	was	and	had	him	was	but	his	the	you			
4	7	7	you	and	had	him	was	but	his	the	you			

Trace of the merge of the sorted left half with the sorted right half

Merging

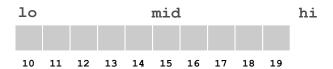

Merging. Combine two pre-sorted lists into a sorted whole.

How to merge efficiently? Use an auxiliary array.

Mergesort: Java Implementation

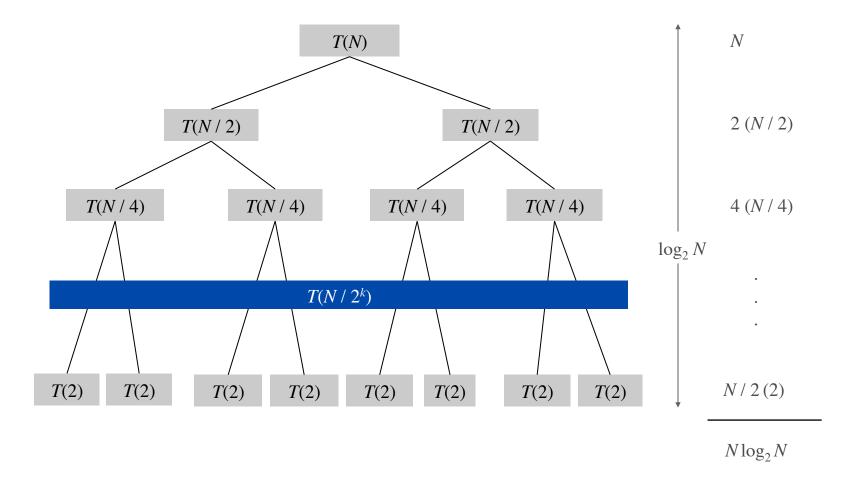

```
public class Merge {
   public static void sort(String[] a) {
      sort(a, 0, a.length);
   // Sort a[lo, hi).
   public static void sort(String[] a, int lo, int hi) {
      int N = hi - lo;
      if (N <= 1) return;</pre>
      // recursively sort left and right halves
      int mid = lo + N/2;
      sort(a, lo, mid);
      sort(a, mid, hi);
      // merge sorted halves (see previous slide)
```

Mergesort: Mathematical Analysis

Analysis. To mergesort array of size N, mergesort two subarrays of size N/2, and merge them together using $\leq N$ compares.

We assume N is a power of 2

Mergesort: Mathematical Analysis

Mathematical analysis.

analysis	comparisons
worst	$N \log_2 N$
average	$N \log_2 N$
best	$1/2 N \log_2 N$

Validation. Theory agrees with observations.

N	actual	predicted
10,000	120 thousand	133 thousand
20 million	460 million	485 million
50 million	1,216 million	1,279 million

Sorting Challenge 2

Q. A credit card company sorts 10 million customer account numbers, for use with binary search.

Using mergesort, what kind of computer is needed?

- A. Toaster
- B. Cell phone
- C. Your laptop
- D. Supercomputer
- E. Google server farm

Sorting Challenge 3

Q. What's the fastest way to sort 1 million 32-bit integers?

Mergesort: Lesson

Lesson. Great algorithms can be more powerful than supercomputers.

Computer	Compares Per Second	Insertion	Mergesort		
laptop	10 ⁷	3 centuries	3 hours		
super	10 ¹²	2 weeks	instant		

N = 1 billion

Longest Repeated Substring

Redundancy Detector

Longest repeated substring. Given a string, find the longest substring that appears at least twice.

Brute force.

- \blacksquare Try all indices i and j for start of possible match.
- Compute longest common prefix for each pair (quadratic+).

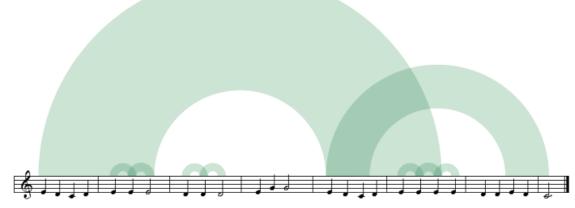

Applications. Bioinformatics, data compression, ...

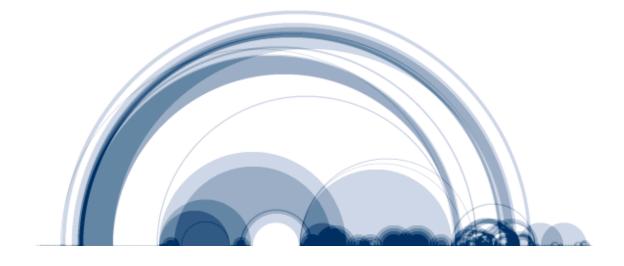

LRS Application: The Shape of a Song

Music is characterized by its repetitive structure.

Mary Had a Little Lamb

Like a Prayer

Longest Repeated Substring: Brute-Force Solution

Longest repeated substring. Given a string, find the longest substring that appears at least twice.

Brute force.

- \blacksquare Try all indices i and j for start of possible match.
- Compute longest common prefix (LCP) for each pair.

Mathematical analysis.

- All pairs: $0 + 1 + 2 + ... + N-1 \sim N^2/2$ calls on LCP.
- Way too slow for long strings.

Longest Repeated Substring: A Sorting Solution

input string 0 1 2 3 4 5 6 7 8 91011121314 aacaagtttacaagc form suffixes sort suffixes to bring repeated substrings together suffixes sorted suffixes 0 aacaagtttacaagc 1 acaagtttacaagc o aacaagtttacaagc 2 caagtttacaagc 11 aagc 3 aagtttacaagc 3 aagtttacaagc 4 agtttacaagc 9 acaagc 5 gtttacaagc acaagtttacaagc 6 tttacaagc 12 a g c 7 ttacaagc 4 agtttacaagc 8 tacaagc 14 C acaagc 10 caaqc 10 caagc 2 caagtttacaagc 11 aagc 13 **QC** 12 agc 5 gtttacaagc 13 g C 8 tacaagc 14 C 7 ttacaagc compute longest prefix 6 tttacaagc between adjacent suffixes longest repeated substring

aacaagtttacaagc

Longest Repeated Substring: Java Implementation

Suffix sorting implementation.

```
int N = s.length();
String[] suffixes = new String[N];
for (int i = 0; i < N; i++)
    suffixes[i] = s.substring(i, N);
Arrays.sort(suffixes);</pre>
```

Longest common prefix. lcp(s, t)

- Longest string that is a prefix of both s and t.
- Ex: 1cp("acaagtttac", "acaagc") = "acaag".
 Easy to implement (you could write this one).

Longest repeated substring. Search only adjacent suffixes.

```
String lrs = "";
for (int i = 0; i < N-1; i++) {
   String x = lcp(suffixes[i], suffixes[i+1]);
   if (x.length() > lrs.length()) lrs = x;
}
```

OOP Context for Strings

String representation.

- A string is an address and a length.
- Characters can be shared among strings.
- substring() computes address and length.

bee important noce at
http://
algs4.cs.princeton.edu/63suffix/
does not copy chars

See important note at

D0	D1	D2	D3	D4	D5	D6	D7	D8	D9	DA	DB	DC	DD	DE			A0	A1	
a	a	С	a	a	g	t	t	t	a	С	a	a	g	С	S	3	D0	15	
	s = "aacaagtttacaagc"; address length																		
	S	= "	aac	aag	ttta	acaa	ıgc"		ee htt	tp://	java-p	erfor	mance	.info				_	TN a-1-7-0_06
	t	= s	. su	bst	rinç	g (5,	15);									в0	в1	
															t		D5	10	

Consequences.

- substring() is constant-time operation (instead of linear).
- Creating suffixes takes linear space (instead of quadratic).
- Running time of LRS is dominated by the string sort.

Sorting Challenge 4

Q. Four researchers A, B, C, and D are looking for long repeated sequences in a genome with over 1 billion characters.

Which one is more likely to find a cure for cancer?

- A. has a grad student to do it.
- B. uses brute force (check all pairs) solution.
- C. uses sorting solution with insertion sort.
- D. uses sorting solution with mergesort.

Longest Repeated Substring: Empirical Analysis

Input File	Characters	Brute	Suffix Sort	Length
LRS.java	2,162	0.6 sec	0.14 sec	73
Amendments	18,369	37 sec	0.25 sec	216

Chromosome 11	7.1 million	2 months [†]	61 sec	12,567
Pi	10 million	4 months †	84 sec	14

[†] estimated

Lesson. Sorting to the rescue; enables new research.

Summary

Binary search. Efficient algorithm to search a sorted array.

Mergesort. Efficient algorithm to sort an array.

Applications. Many many applications are enabled by fast sorting and searching.
